

Focus Cyber Protect

Don't let the darker side of the internet threaten your business.

Connectivity is essential for any business, no matter your size or industry the internet is an indispensable tool. All the functions you need to run your business - email, browsing, cloud, WiFi, software, hardware - are all vulnerable to attack.

An online attack can leave you exposed to viruses, data breaches, loss of data, loss of connectivity, and impact your staff, your customers and the reputation of your business. And will probably cost you money.

Even with a firewall or antivirus software in place you may still be vulnerable.

Our proactive port scanning software will go deep into your router and behind your firewall to reveal any open ports or vulnerabilities. An open port is the most common way a hacker can break into your system to harvest data or initiate devastating ransomware attacks.

Scanning your system regularly for threats, open ports and vulnerabilities is the easiest and most cost-effective way of taking control of your security, because it exposes invisible threats before they become a problem.

Your bespoke report provides actionable and prioritised information that identifies and allows your business to close security holes.

Vulnerability exposure should be the first consideration in your business's security strategy, without it everything else you have in place won't protect you. And for that reason, Vulnerability Assessment is included first in every one of our Cyber Protect packages.

Available on packages:

Cyber **Protect**

Cyber Protect Plus

Cyber Protect Premium

Cyber Protect Professional

Our Vulnerability Assessment services are proven to:

- ✓ Identify security holes in your network
- Provide a full comprehensive report

The weak link in your security chain may be sitting right in front of you!

Every piece of hardware in your business – PCs, servers, printers, laptops – may be housed in your office and all are exposed to the outside world via the internet, the cloud and wireless and Bluetooth connections.

They can be full of unused data and applications, running a slow CPU, vulnerable to attack or just not fit for purpose anymore. Ineffective or aged hardware can seriously hinder a business's productivity, especially as update patching may not work on older machines.

All IT has a shelf life, so protect your assets with a Network Inventory.

Included in all our Cyber Protect packages, this essential scan includes:

- Full asset inventory
- Hardware lifecycle report
- Full user count
- Password strength assessment
- Connection speed tracker

Available on packages:

Cyber **Protect**

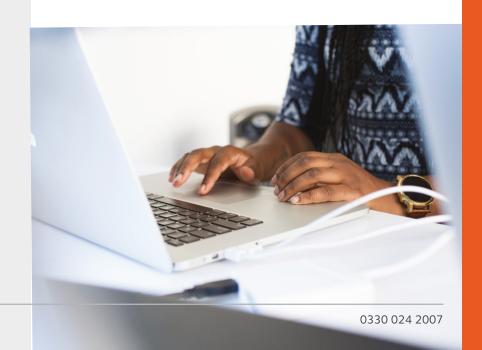

Cyber **Protect Plus**

Cyber Protect Premium

Cyber Protect Professional

Our Network Inventory service is proven to provide:

- Full IT estate report
- Ageing hardware list
- Operating system list

Have your business's credentials been compromised?

It is a known fact that employees use their corporate email accounts and often corporate passwords to sign up to third party sites and applications. If these sites or apps are breached, your employee's email address, passwords and PII is obtained by criminals and distributed through an 'underground' network known as the Dark Web. This poses a serious threat to your business as nearly 47 percent of people say there is no difference in their passwords used for personal and work accounts.

CyberSIGHT, our Dark Web Monitoring service, goes to the deepest, darkest areas of the web to find stolen credentials on your corporate email accounts and produces comprehensive reports and real-time alerts when evidence of a breach is found.

Understand how many credentials are currently available on the Dark Web

Receive a **free report** outlining how many credentials related to your domain are available on the Dark Web.

Available on packages:

Cyber **Protect**

Cyber **Protect Plus**

Cyber Protect Premium

Cyber Protect Professional

Remediate to minimise the immediate risk

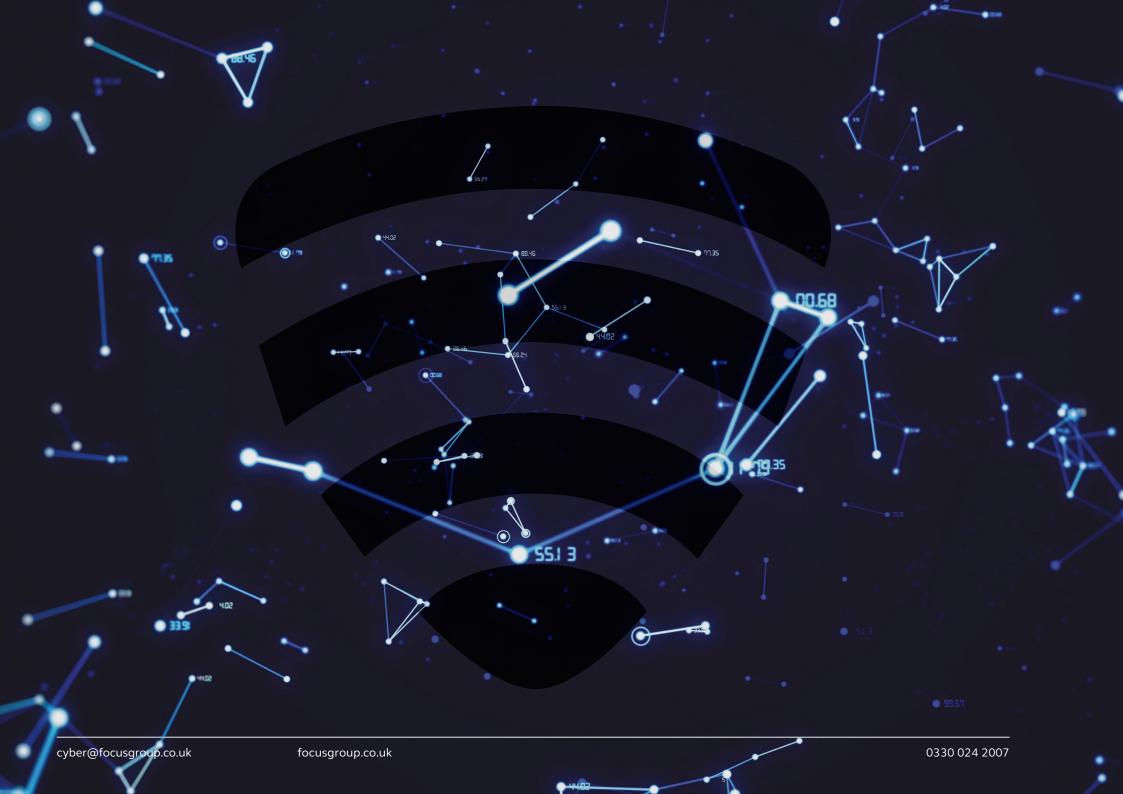

Receive advice on what to do to immediately protect your business from a breach, as a result of stolen credentials

24/7 monitoring and alerts when a new breach is found

Activate constant monitoring on your corporate domains and be alerted when evidence of a new breach is found so you can instantly terminate the threat.

Our Dark Web Monitoring service is proven to provide:

- Ø Alerts when evidence of a new breach is found
- Portal access for real-time reports
- Supply chain monitoring

Could your business be breached?

Unfortunately, most businesses only find out where their weak points are after a breach has occurred. This is a dangerous and costly way to understand where your resilience could be improved.

Using our expert and accredited consultants' knowledge and experience, we have constructed a free, online IT security gap analysis service to help you proactively identify the areas of your business's network, infrastructure and cyber security posture which can be enhanced.

CyberGAP comprises of multiple modules and multiple choice questions which you answer to score your business's security posture. At the end you will receive a detailed report, tailored to your selections, outlining all of the great areas of your network and infrastructure, and areas which can be improved along with recommendations on how to do so.

Available on packages:

Cyber **Protect**

Cyber **Protect Plus**

Cyber Protect Premium

Cyber Protect Professional

Our Free Gap Analysis service is proven to provide:

- A thorough IT security assessment
- Built from the Cyber Essentials Plus framework
- Operation
 Operation
- Reassurance on existing systems

Our Package Gap Analysis service is proven to provide:

- A thorough IT security assessment
- ⊗ Built from the Cyber Essentials Plus framework
- O Detailed reporting
- Reassurance on existing systems
- Expert remedial advice for identified gaps

Stop your employees from causing security incidents.

It is becoming widely known that over 90% of breaches experienced by businesses stem from cyber attacks directed towards employees. With attacks becoming more sophisticated and targeted for each business, security technology cannot be solely relied upon to keep you secure.

Cyber Security Awareness is our market leading brand for delivering fully managed Security and GDPR Awareness services. The cyber market is saturated with plenty of phishing simulation and training services, however Security Awareness Training and Testing is different in that it is fully managed, making it more effective and saving you time and resources.

40-70% of your employees will be a cyber-risk

Our Baseline phishing test will raise awareness and show you how vulnerable your business currently is to targeted cyber crime.

Available on packages:

Cyber Protect Plus

Cyber **Protect Premium**

Cyber Protect Professional

Your employees will receive professional and interactive security awareness e-learning

Upskill your employees so they have the correct skills to avoid falling victim to cyber crime.

Your employees will be kept vigilant

Ongoing, targeted and randomised phishing testing with additional training and support as required.

Our Security Awareness Training & Testing service is:

- Fully managed, taking up none of your time or resources
- Bespoke for your business
- Available in multiple languages
- Includes detailed reporting
- Provides remedial training for 'at-risk' employees

Powered by:

Cybersecurity

awareness

Training your employees on the most current GDPR legislation keeps your business compliant and reduces the risk of an internal data breach.

Our GDPR Awareness training course is suitable for all employees and easy to understand. As a fully managed service, we will deliver training to your employees on your timescales, report progress back to you and chase those who have not completed the course. Our short training course is available in multiple languages (subtitles) and is interactive, complete with a quiz that proves understanding.

Your employees will receive professional and interactive GDPR awareness e-learning

Employees will be trained on all aspects of the current GDPR legislation and Data Protection Act 2018. New starters are enrolled in the course as and when they join.

Available on packages:

Cyber Protect Premium

Cyber Protect Professional

Receive reports on employee progress

You will receive regular reports on employee progress. As part of your fully managed service, employees who have not completed the course will be reminded by our engineers.

Gain evidence, proving employee understanding

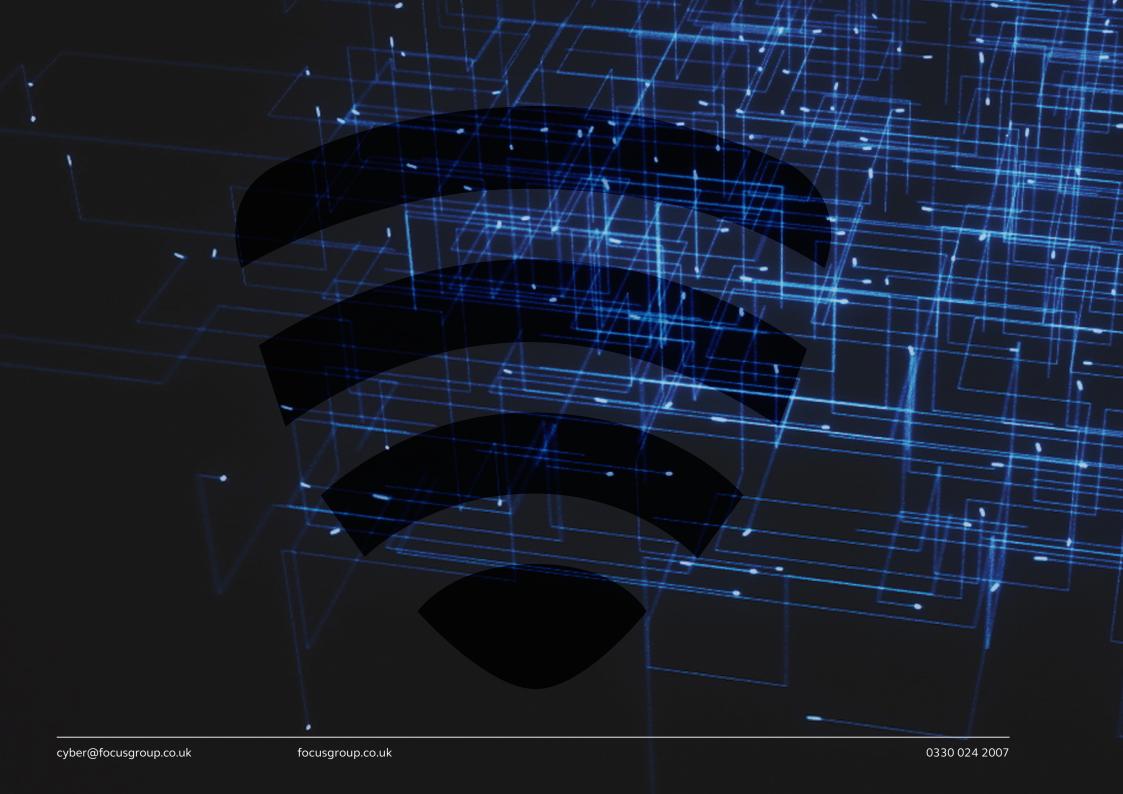

Ultimately, you will receive evidence of employee understanding which keeps your business GDPR compliant and reduces the risk of suffering an internal breach.

Our GDPR Awareness service is proven to provide:

- Evidence of employee understanding of GDPR legislation
- ∀ideo based training in multiple languages
- Detailed reporting

Powered by:

If you want your customers, suppliers and staff to trust your commitment to cyber security then why not prove that you are up to industry standard?

Cyber Essentials is a Government-backed, industry-supported scheme that helps businesses protect themselves against common online threats and ensures business-wide best practice.

This accreditation - created by the National Cyber Security Centre - demonstrates that your business, no matter its size, is taking cyber security seriously. Your certification can mean your business is less likely to be targeted and more likely to be considered when customers are looking for a partner that takes cybercrime, GDPR and security seriously.

Available on packages:

Cyber Protect Professional

Once certified you will be listed in the Cyber Essentials Business Directory and can display your accreditation mark on your site and materials. Ideal for larger companies and part of our Cyber Protect Professional package we will work with you to ensure your IT system meets the official standards and successfully gains this accreditation.

We'll even pay the fee!

Our Cyber Essentials Plus services are proven to:

- Provide customer reassurance that you are working to secure your IT against cyber attacks
- Attract new business with the promise you have cyber security measures in place
- Present a clear picture of your business's cyber security level
- Show accreditation for those Government contracts that require Cyber Essentials certification

Cyber solutions have become absolutely essential for every business, regardless of size, who operate using IT.

If you are serious about protecting your business from modern-day threats, we highly recommend you consider our line of cyber solutions.

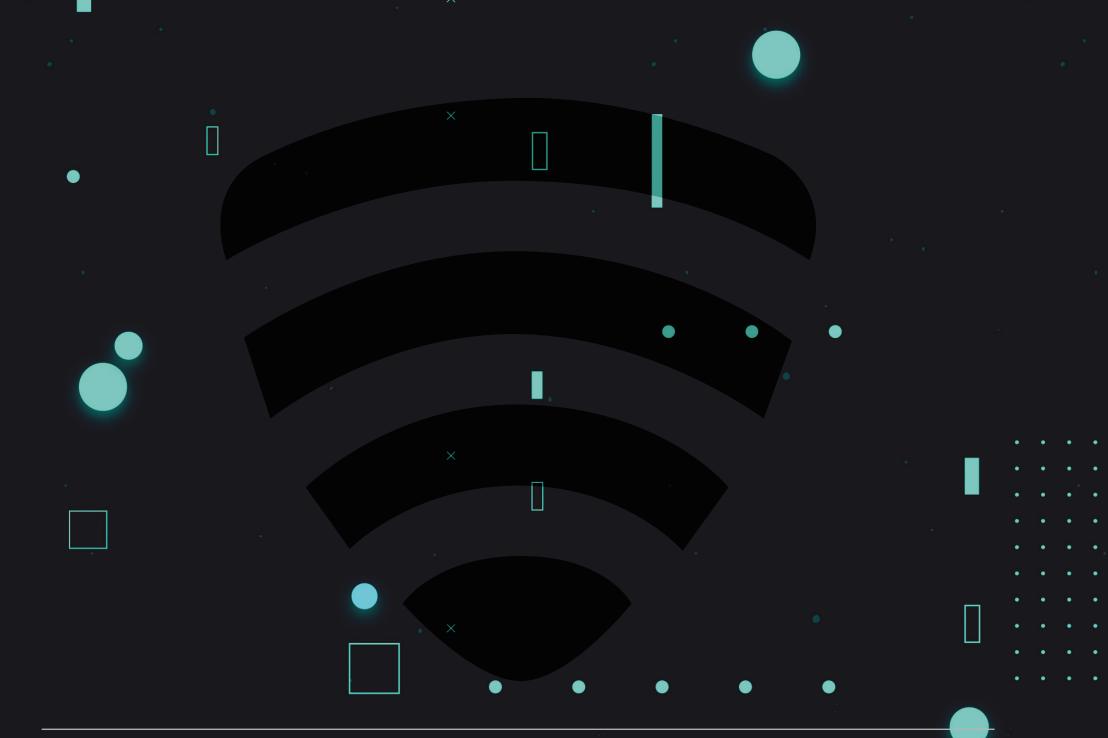

Email security has been long hailed as a "must have" for any business. This, of course, is still true.

With an unparalleled growth in threats including areas such as CEO fraud and other impersonation attacks, businesses need to be assured that their security develops to stay ahead of these threats.

Has your email security solution evolved to meet today's threats though? Have you remained with your provider because "it does the job" or migrating has seemed a painstaking task? With migration support included in our service, we can ensure your business has a smooth transition to a service that delivers protection against the very latest threats.

Features such as compliance assurance, dual layered sandboxing, encryption and archiving, ensure you have the multiple protection layers required for your critical email services and all within in a single cloud-based solution.

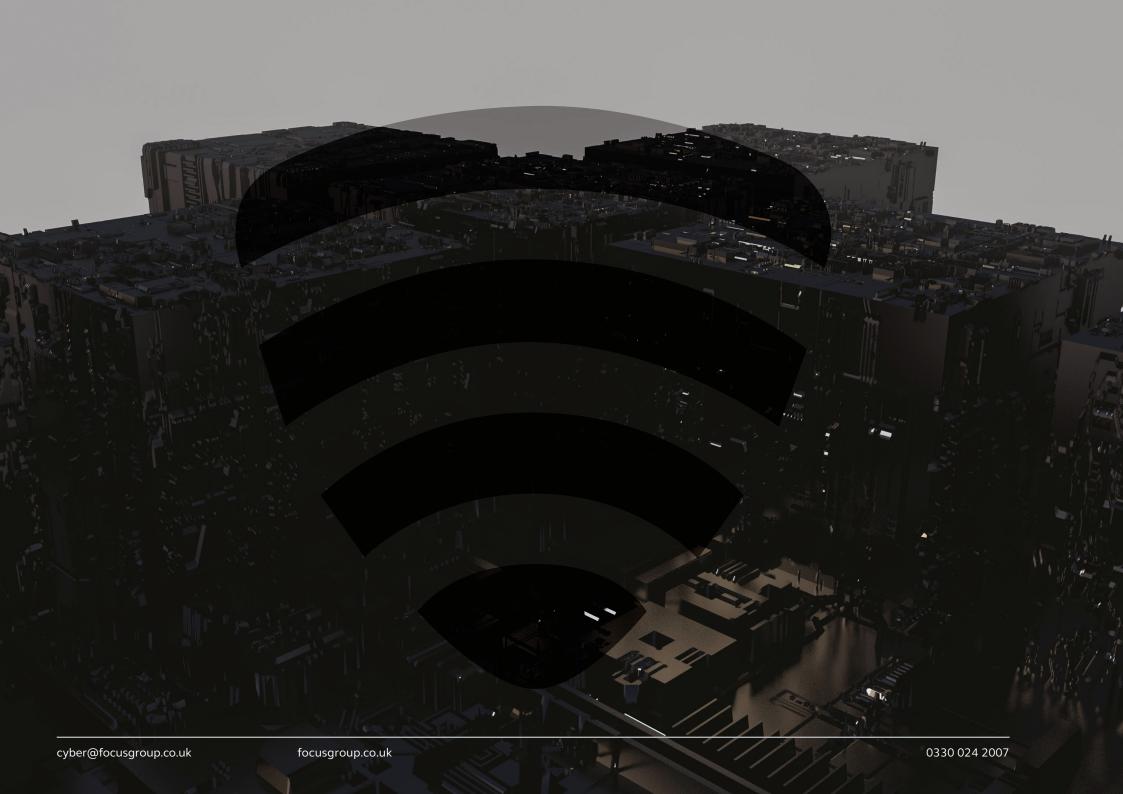

Subscriptions available:

Monthly Annual Multi-year

Bundle (upon request)

Our Email services are proven to provide:

- O Unique time-of-click protection from malicious URLs
- Ompliancy with archiving, business continuity and encryption
- Filtering and control of outbound email as well as inbound
- O Dual layered sandboxing options
- O Domain spoofing protection
- ✓ Protection against CEO Fraud

The network perimeter has changed. Practically overnight, almost every employee became a "remote worker" and potentially risking exposing the security of their web usage to an unprecedented level of threats.

Although many businesses are benefitting from productivity when adopting or leveraging cloud applications to support remote working, this has also created a complex threat landscape which needs to be addressed with some urgency. The introduction of an extraordinary volume of "shadow IT", has raised the threat landscape even further.

Existing IT systems were generally architected to route all web traffic through specific access points, such as the business's headquarters or regional offices where security could be enforced and easily monitored and maintained.

Our Web Security solution provides protection for roaming, personal (BYOD) and guest devices with zero-touch configuration. With no requirement to proxy web traffic, your users are guaranteed ultra-fast response times.

Subscriptions available:

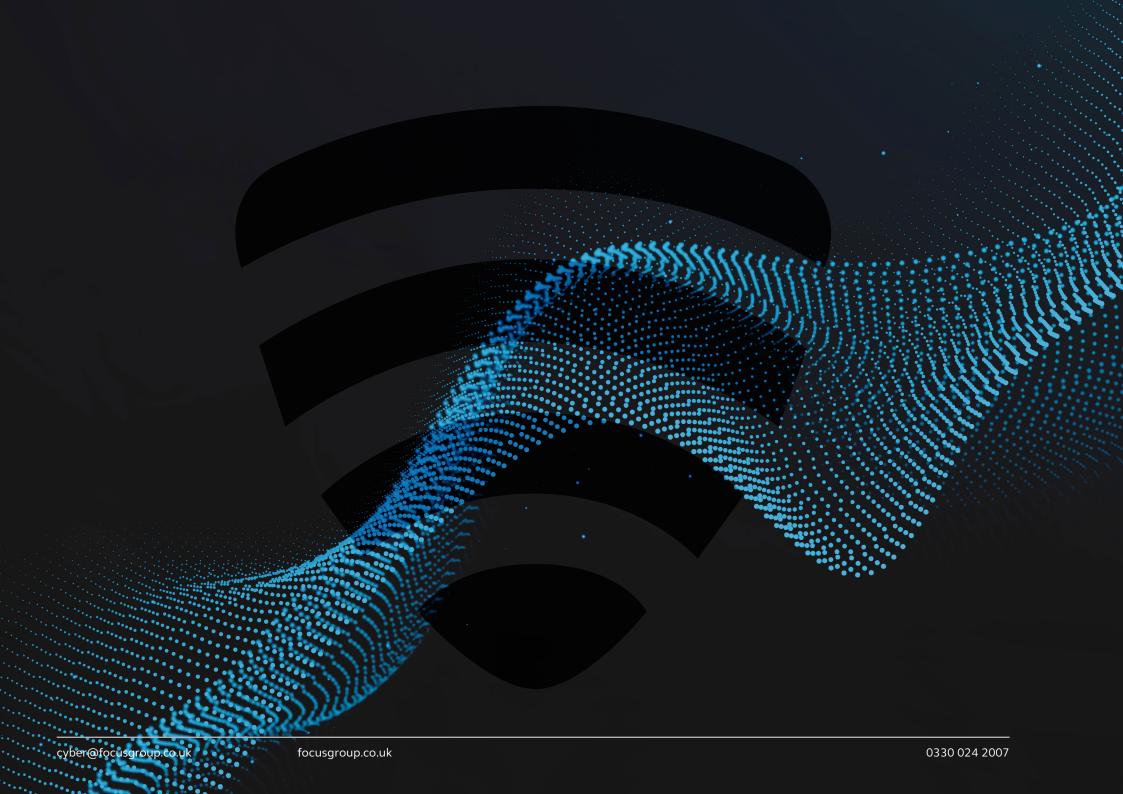

Monthly
Annual
Multi-year
Bundle (upon request)

Our services were built for the cloud. With 140 categories and 500+ sub-categories, you can be assured of your web security.

Our Web Security services are proven to provide:

- Real-time traffic analysis with URL reputation and threat intelligence

We highly recommend enhancing web security with a CASB $\,$

Approved access to cloud applications is essential in today's changing working environments, even more relevant with the recent influx of necessitated remote workers.

With more users working away from the secure office networks, the access to cloud-based "shadow IT" has exploded in use.

Users are now finding a multitude of cloud solutions to communicate and share information on that they see as necessary to enable them to continue to provide the high levels of performance they did in an IT secured location.

Without visibility of the access and utilisation of these services, the threat of advance malware, data security and malicious or accidental insider access is on the rise. The usage of Social Media, data storage and CRM's is unmanaged and un-monitored and can be easily abused or put your business's critical data and reputation at risk.

Subscriptions available:

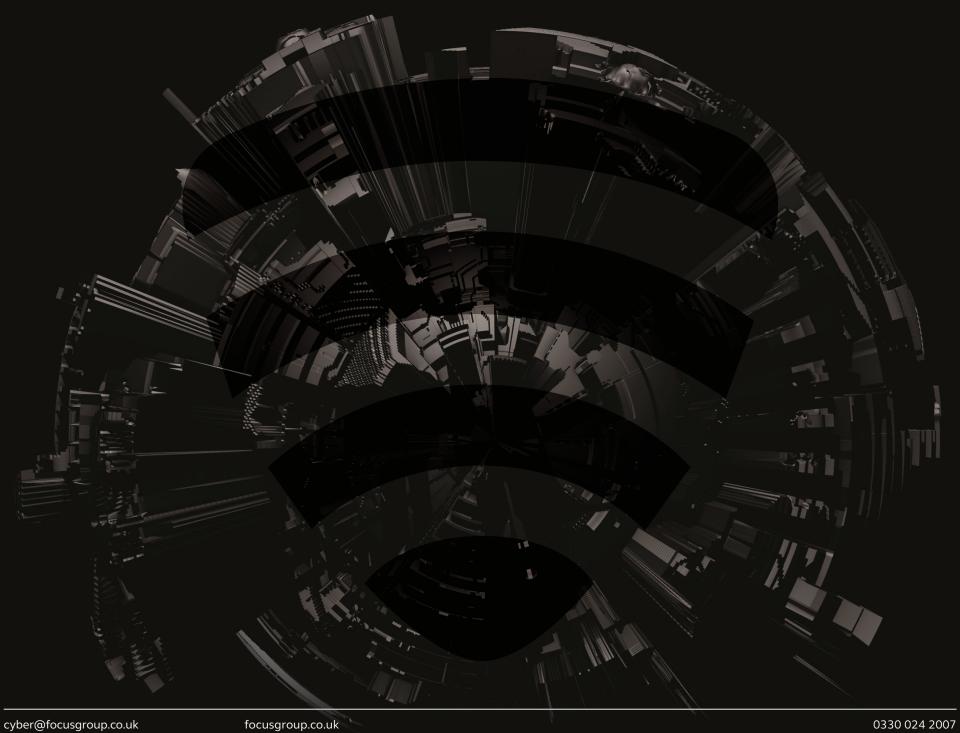

Monthly
Annual
Multi-year
Bundle (upon request)

A Cloud Access Security Broker (CASB) solution gives a business the ability to discover, analyse, secure and manage cloud activity. This is regardless of whether the user is on the corporate network or working remotely. Our Web Security solution provides protection for roaming, personal (BYOD) and guest devices with zero-touch configuration. With no requirement to proxy web traffic, your users are guaranteed ultra-fast response times

Our services were built for the cloud. With 140 categories and 500+ sub-categories, you can be assured of your web security.

Our CASB services are proven to provide:

- Visibility This is the cornerstone of cloud security. You can't secure what you don't know.
- Compliance As more data is moved to the cloud, businesses must comply with many regulations such as PCI DSS, GDPR and HIPAA.
- **Data Security** Scan files on upload and change the specific content using DLP templates.
- Threat Protection Cloud apps are being targeted with increasing sophistication and volume. Malicious or suspicious user activity can be tracked, identified and managed.

cyber@focusgroup.co.uk

Multi Factor Authentication (MFA) has been a critical component of IT security for businesses for many years.

Today, the public in general will experience MFA almost on a daily basis. Whether it is through online banking or transacting on their favourite online shopping sites. With the number of remote employees hitting levels never before experienced, the necessity of securely identifying your own users accessing your systems is now critical.

Some businesses have delayed adding this layer of security with the perception that MFA is difficult to install or deploy. Some are put off by the impact MFA will have on end-users by asking them to install an app or carry a physical token. We can provide a wealth of authentication options to satisfy any requirement.

Our solution is easy to install and deploy and has minimal impact on endusers. Whether you require a cloud or in-house solution you want to be able to deploy and maintain the solution quickly.

We have deployed and managed MFA for our customers all over the globe.

Subscriptions available:

Monthly Annual Multi-year Bundle (upon request)

Our Multi-Factor Authentication services are proven to provide:

- Your users can manage their own preferences of authentication with choices such as SMS, mobile app, email, soft token or even voice
- Hosted, Physical or VM servers
- Internal services and cloud based applications supported
- Adaptive MFA that intelligently challenges users only when a risk is high.

Does Autonomous Breach Protection sound too complex? Resource hungry? Expensive? Necessary?

Until an actual breach occurs, some businesses would rather wait to investigate the necessity of these services. Comparing the cost of a breach against having a solution in place that prevents and detects threats on the endpoints, networks and users is a critical decision in any business.

Too complex? All our breach protection services are managed from a single dashboard solution either cloud hosted or within your own environment. Two clicks is all it takes to get agents deployed across all your endpoints.

Is this resource hungry? What if we said that we back up your own IT function by including a 24x7x365 Managed Detect and Response Team who continually monitor and optimise your solution to ensure every event is handled and resolved? Auto-remediation will also activate to automatically address infected hosts, malicious files and compromised user accounts and will create playbooks for future events.

As for expensive? If you have estimated the cost of a breach on your infrastructure and the resulting loss of productivity or customer services, we are convinced you will be impressed with the cost comparison of our complete solution than with leading providers of just one or two of the component parts.

Experienced a breach? Are you ready to pay a retainer fee to a 3rd party in the event of a major cyber incident? We'll provide this free of charge. Really, we will.

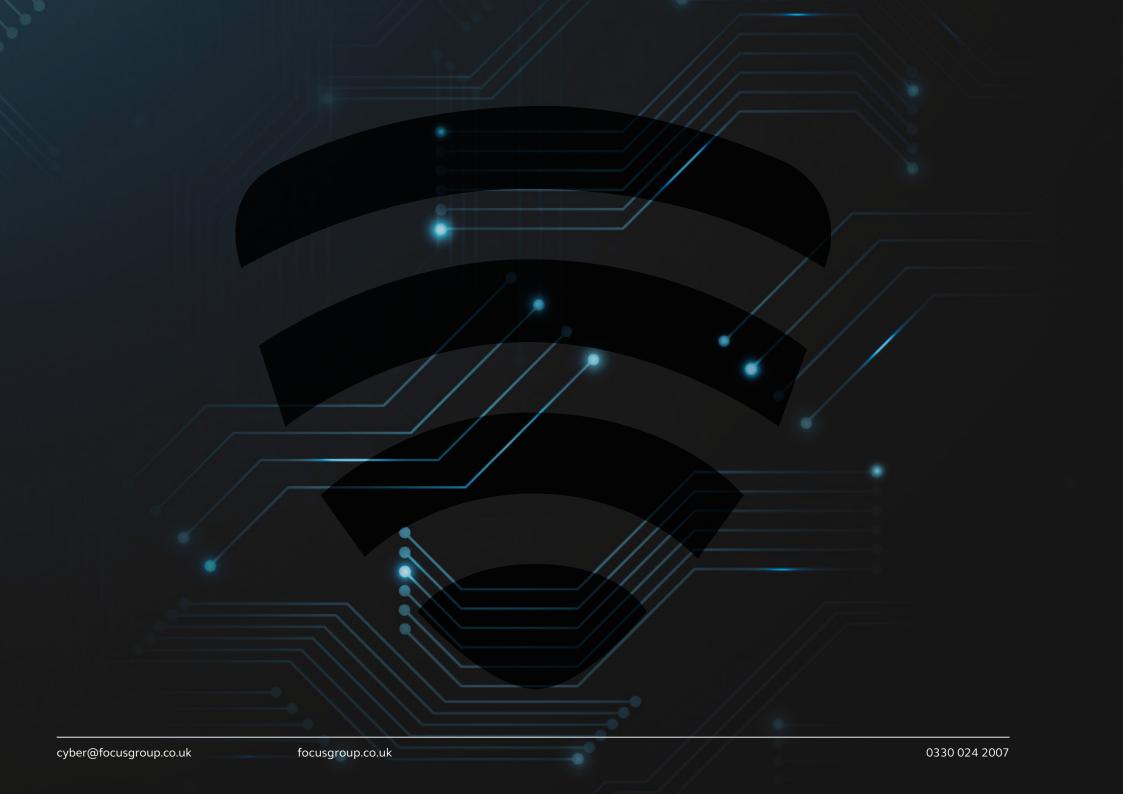

Our 360 Service provides a single solution that provides protection across your infrastructure:

- Next Generation Anti-Virus (NGAV)
- Endpoint Detect and Respond (EDR)
- ✓ Network Analytics
- User Behaviour Analytics (UBA)
- Oeception
- Incident Response

Subscriptions available:

Monthly
Annual
Multi-year

Bundle (upon request)

Malicious attackers don't work office hours and threats don't stop evolving after a penetration test.

Our security assessments can be active 24x7x365 a year through AI powered scanners and combined with a human triage to produce meaningful, actionable results. With a global elite team of over 1,500 cybersecurity researchers, each vetted and continuously curated, your key systems are tested by a combined expertise your attackers cannot keep up with.

With patch verification services and a customer specific Attacker Resistance score, you have the information you've always wanted constantly at hand and all backed by continual assessment by the Mission Operations team.

Providing complete control to you, the customer, we provide a portal access where you can stop or pause testing at the touch of a button.

Of course, all of our services are there to assist your compliance requirements whether they are PCI, NIST or ISO. All of our testing can be CREST or CHECK accredited

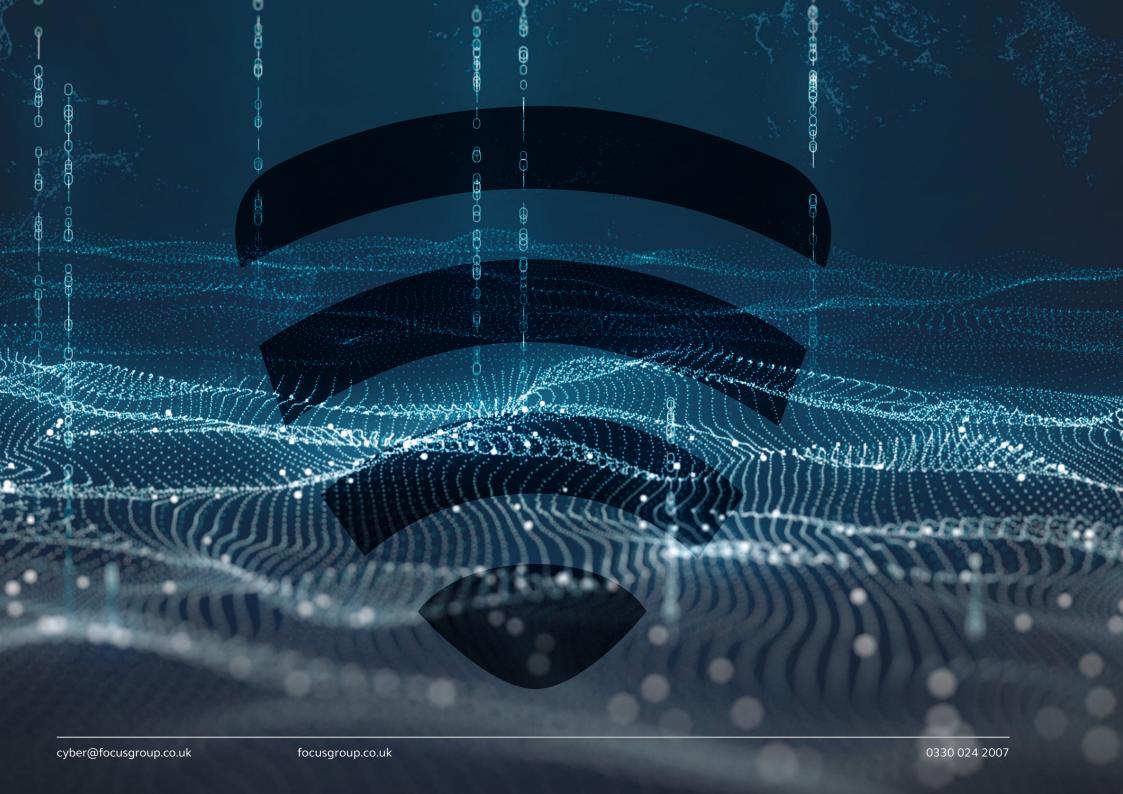

Vulnerability assessments and penetration testing have previously been unachievable at this scale of protection and testing.

Our Penetration Testing services are proven to provide:

- 4x higher ROI than traditional penetration testing
- ② 3x more time spent on targets than traditional pen testing
- 20% reduction in failed patches due to patch verification processes
- Less than 72 hours to onboard versus weeks in a traditional model
- A team of researchers to monitor and meet your requirements

Subscriptions available:

Monthly
Annual
Multi-year
Bundle (upon request)

The cyber threat is a global 24x7x365 organised attack that doesn't concern itself about the impact on your business or your customers.

Today, businesses need to be assured that they are providing the highest level of protection for their critical assets whilst ensuring the operating costs are practical. To attempt to monitor, collate and evaluate many key services requires a sizeable investment in time, highly skilled resource and a variety of security solutions. These costs will escalate dramatically each time a service is added or changed.

Our Managed SOC is a service that leverages a constantly evolving Threat Monitoring Platform for detecting malicious and suspicious activity across three critical attack vectors: Endpoint, Network and Cloud.

Your business needs to be assured that key threats are being detected and you are alerted in real-time with specific, and informed, remediation help and advice.

Based upon a per device model, with no expensive log capacity charges, we know in today's dispersed workforce, with global access to services and data, our Managed SOC is today's essential security assurance partner.

Subscriptions available:

Monthly
Annual
Multi-year
Bundle (upon request)

Our hardware free SOC platform provides true multitenant insights, and visibility, that provides our customers with the assurance that their key assets are being monitored and protected.

Our service is comprised of an elite team of security veterans and experts who proactively hunt and investigate threat activity across all of our managed customers infrastructure. We perform a triage of detections and work with the you on the remediation when an actionable threat is discovered

Why do I need a SOC?

Some examples of why you might need a SOC include:

- > Do you need a proactive threat detection and alert service for internal devices, your network and cloud services?
- ➤ Do you want to know that 24x7x365 your infrastructure is being monitored by leading security engineers who are constantly trained in the latest threats?
- **>** Are you running an online service for the public?
- **>** Do you have several different office locations?
- > Do you need predictable pricing that won't change based on log volumes?
- > Do you share sensitive data with other businesses?
- **>** Do you have several ingress points of access?
- > Do you need compliancy level reporting?

Talk to us now about locking in cyber security for your business.
