

Clipfine

Family-run construction services company, Clipfine now operates as a modern, forward-thinking organisation thanks to Focus Group's Digital Transformation services.

Number of users: 150

The project

Known for working on prestigious UK projects like Tottenham Hotspur Stadium and Paddington Station, Clipfine sought Focus Group's expertise following a high recommendation from Community Vision.

The construction support company needed a comprehensive IT infrastructure overhaul. They required a provider who could understand their challenges and deliver exceptional service as a fully outsourced IT-managed service.

Clipfine aimed to transition from their outdated on-premise servers to a modern, fully hosted IT environment. Focus Group was chosen for its ability to meet these needs and provide the service excellence necessary to support Clipfine's evolving technological requirements.

The solution

Following extensive presales scoping and a thorough understanding of the existing platform, Focus Group were in a position to propose an all-encompassing range of solutions to update Clipfine's core infrastructure, delivering the enterprise-class environment they sought.

Projects within this business transformation included moving its existing Sage system into the Microsoft Azure cloud platform, and its user files into Microsoft SharePoint. The move to an all-digital future also included communications, with an upgrade of the telephony platform to a fully hosted and maintained Horizon system.

The roadmap of work to migrate everything into the cloud - giving Clipfine the modernised and futureproof infrastructure-as-a-service environment it required - was undertaken over a period of approximately six months. Future innovations have also been scoped, with timelines agreed upon by the senior management team.

The result

Clipfine is now deep into its digital workplace transformation journey, meaning that they now operate as a modern, forward-thinking organisation which has embraced change and can compete effectively as a nationally-recognised leader in their field of expertise.
