THE INSIGHTS

Published: 24th June 2024

Welcome to your June update

We know it's difficult to keep up with the number of changes and releases that come from Microsoft.

That's why every month, we highlight the latest updates that are important to your business.

News

- 60 new products launched at Microsoft Build
- Windows Recall now turned off by default

Copilot

- Copilot agents launched to support your teams
- Copilot dashboard available at no extra cost

365

- Use new 'archive' feature in SharePoint for inactive sites

Azure

- Real-time intelligence comes to Microsoft Fabric

MICROSOFT NEWS

- [60 new products launched at Microsoft Build](#)

- [Watch the highlights from Build.in 90 seconds](#)

- [10 AI terms everyone should know](#)

- [Why AI sometimes gets it wrong - and what Microsoft is doing to address it](#)

- [Melbourne Airport is using Microsoft Fabric to synchronise flight bookings and ground transportation data](#)

MICROSOFT COPILOT

Agents: New custom copilots that automate business process

Microsoft has launched new capabilities in [Microsoft Copilot Studio](#) to build custom copilots that act as agents that work independently under your direction to:

- Automate long-running business processes.
- Reason over actions and user inputs.
- Leverage memory to bring in context.
- Learn based on user feedback.
- Record exception requests and ask for help.

Go further with Team Copilot

[Team Copilot](#) expands Copilot beyond a personal assistant to act as a valuable team member, participating and contributing along with the team. And of course, you're always in control, assigning tasks or responsibilities to Copilot so the whole team can be more productive, collaborative, and creative, together.

The Microsoft Copilot Dashboard in Viva Insights will become available with Copilot for Microsoft 365

In the coming months, the [Microsoft Copilot Dashboard](#) will become available to all Copilot for Microsoft 365 customers at no additional cost and will not require a Viva or Viva Insights license.

MICROSOFT 365

Use new 'archive' feature in SharePoint for inactive sites

Microsoft 365 will have a new feature to archive inactive sites on SharePoint.

This will save on storage costs and limit data sprawl and make spend more predictable. If you're a Copilot customer it will also help stop Copilot from using old and inaccurate data (with the right settings).

MICROSOFT AZURE

Real-Time Intelligence comes to Microsoft Fabric

The new Real-Time Intelligence within Microsoft Fabric will provide an end-to-end software as a service (SaaS) solution that will empower customers to act on high volume, time-sensitive and highly granular data in a proactive and timely fashion to make faster and more-informed business decisions. Real-Time Intelligence, now in preview, will empower user roles such as everyday analysts with simple low-code/no-code experiences, as well as pro developers with code-rich user interfaces.

Features of Real-Time Intelligence will include:

- Real-Time hub, a single place to ingest, process and route events in Fabric as a central point for managing events from diverse sources across the organisation.
- Event streams that will provide out-of-the-box streaming connectors that helps remove the complexity of ingesting streaming data from external sources.
- Event house and real-time dashboards with improved data exploration
- Data Activator that will integrate with the Real-Time hub, event streams, real-time dashboards and KQL query sets, to make it seamless to trigger on any patterns or changes in real-time data.
- AI-powered insights, now with an integrated Microsoft Copilot in Fabric experience for generating queries, in preview, and a one-click anomaly detection experience, allowing users to detect unknown conditions beyond human scale with high granularity in high-volume data, in private preview.
- Event-Driven Fabric will allow users to respond to system events that happen within Fabric and trigger Fabric actions, such as running data pipelines.
